SEED ROUND · $3.2M · 2026

Every screen is a billboard. None of them are for sale.

AdGrid is the self-serve marketplace that lets any business with a screen — a café, a gym, a laundromat, a lobby — sell ad space the same way Shopify let anyone sell a product. No sales calls, no IOs, no minimums.

THE SETUP

Digital out-of-home just had its consolidation moment.

Three acquisitions in the last twelve months collapsed the programmatic DOOH stack into a handful of enterprise players — and left the long tail of independent screen owners with nowhere to go.

Broadsign → acquires Place Exchange

Nov 2025. Fourth M&A in seven years. Now the largest DOOH platform — 1.8M screens, 370 employees.

T-Mobile → acquires Vistar Media

The leading end-to-end DOOH SSP/DSP folded into a telco's ad business.

Perion → acquires Hivestack

Another independent programmatic DOOH platform absorbed into a larger ad-tech holding co.

Every remaining platform sells to media buyers and national networks. None of them onboard a laundromat with one screen and a Wi-Fi router.

Source: invidis, Nov 2025 — Broadsign/Place Exchange, T-Mobile/Vistar Media, Perion/Hivestack deal coverage.

A $22B market, growing 12% a year — and the programmatic slice is growing faster still.

$22.5B
GLOBAL DOOH AD SPEND, 2026

$56.1B
PROJECTED DOOH SPEND, 2034 (12.1% CAGR)

17.0%
CAGR OF THE PROGRAMMATIC DOOH PLATFORM LAYER

Programmatic DOOH platform spend alone is projected to reach $12.9B by 2030. Almost none of that inventory comes from independently owned screens — because no self-serve rail exists to bring them on.

The gap this creates

Programmatic platforms are built for national campaigns bought by media agencies. The tooling, minimums, and sales motion assume a buyer with a DSP seat and a screen network with a sales team — which excludes the millions of independently owned screens that have neither.

Sources: Fortune Business Insights; Research and Markets, Programmatic DOOH Platform Market Report, 2026.

A two-sided, self-serve marketplace — not another enterprise SSP.

For operators (screen owners)

List a screen in minutes. AdGrid handles the player software, ad approval queue, and payout — the operator sets a floor price and gets paid.

Built on the same product already live in the pilot network: onboarding wizard, approval queue, revenue dashboard.

For advertisers (any local business)

A guided campaign wizard — pick an area, pick screens, set a budget, pay by card. No media buyer, no minimum spend, live in a day.

Signup through pay-wall already runs end-to-end in production today.

AdGrid takes a transaction fee on every campaign. No enterprise sales team, no IOs — the product is the sales motion.

Money and measurement, closed loop.

Advertiser
builds campaign, pays by card

→

AdGrid
routes creative, holds funds

→

Screen
plays creative, shows QR

→

Consumer scan
tracked, then redirected

Scan data
feeds advertiser dashboard + pixel forwarding (Meta / Google Conversions API)

→

Payout
AdGrid keeps take rate, transfers the rest to the operator via Stripe Connect

The advertiser only re-ups if the screen produced measurable scans. That closed loop — pay, play, prove, pay-out — is the whole product.

WHERE WE ACTUALLY ARE

Built, piloted, and verified — with a named punch list before public launch.

We ran a live verification pass against production data this month. Here's the real state, not the pitch version.

12
SCREENS ONBOARDED (PILOT NETWORK)

8
SCREENS LIVE IN PRODUCTION

2
OPERATOR PARTNERS TRANSACTING

PROVEN LIVE

Proven live

Advertiser signup → 5-step campaign wizard → review → pay-wall runs end-to-end on real infrastructure. Screen onboarding, approval queue, and role-based dashboards all work.

FUNDED ROADMAP

Funded roadmap

Scan tracking, operator payouts, and tenant data isolation are built but not yet wired end-to-end in production. This is the first 90 days of engineering the round funds.

Three fixes stand between pilot and self-serve public launch.

Activate scan-based measurement

QR redirect + pixel-forwarding service is built and tested in isolation. Repoint the on-screen QR through it so every scan is counted — this is the product's headline metric.

WEEKS 1–3

Turn on operator payouts

Stripe Connect integration exists in the charge pipeline. Make onboarding a required step so operator transfers actually execute, not just advertiser charges.

WEEKS 2–5

Harden tenant data isolation

Scope operator revenue and internal fields out of advertiser-facing data access. Security review before any self-serve public signup.

WEEKS 1–2

These are scoped, known, and estimated — not open-ended risk. This is exactly the work a funded engineering team clears before opening the doors.

Start where nobody else will sell direct.

Cafés & laundromats

High dwell time, zero sales-team coverage today.

Gyms & studios

Captive local audience, existing screen hardware.

Elevator & lobby

Property managers, one screen per building, easy repeat.

Local retail chains

Multi-location owners = multi-screen operators in one signup.

Every enterprise DOOH platform requires a media-buyer relationship to transact. AdGrid requires a credit card. That's the wedge into the segment the consolidation just abandoned.

Nobody else is self-serve on both sides.

PLATFORM	BUYER ONBOARDING	SCREEN OWNER ONBOARDING	MINIMUM SPEND
Broadsign + Place Exchange	Media buyer / DSP seat	Sales-assisted	Enterprise IOs
Vistar Media (T-Mobile)	Media buyer / DSP seat	Sales-assisted	Enterprise IOs
Hivestack (Perion)	Media buyer / DSP seat	Sales-assisted	Enterprise IOs
AdGrid	Self-serve, card on file	Self-serve, screen + Wi-Fi	None

This isn't a claim we're better at their game. It's that their game requires a sales team on both sides — and the market they just consolidated around doesn't include the screens that don't have one.

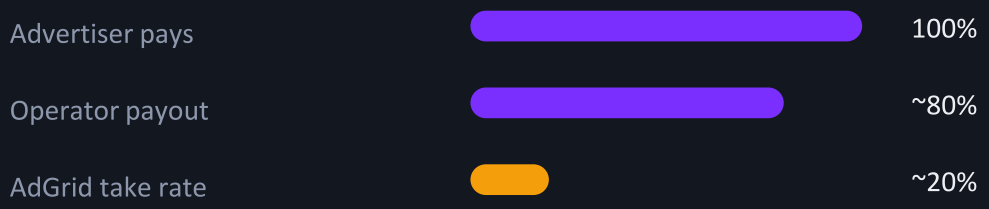
Why this doesn't stay open long

Consolidation makes the wedge bigger, not smaller — three fewer independent platforms to compete with for the self-serve segment.

Take rate on every transaction. No seat fees, no IOs.

Revenue

A platform fee on every advertiser campaign, deducted before the operator payout. Scales directly with campaign volume — no separate SaaS tier to sell.



Why self-serve compounds

Every new screen is inventory with zero incremental sales cost. Every new advertiser is demand with zero incremental sales cost. Both sides onboard themselves — the marketplace gets denser, not more expensive to run.

$3.2M seed to fund the team and the hardware kit that gets screens live faster.

Use of funds

Engineering & product team	45%
Operator hardware kits	25%
Go-to-market & sales	20%
Ops & runway buffer	10%

The hardware kit

Not custom displays — a standardized player box + mount that pairs with commodity screens an operator already owns. It turns “sign up” into “screen is live” without a truck roll or a technician. Removes the single biggest friction point in operator onboarding.

A founder-built platform, ready for a founding team.

AdGrid is built and operated by a solo founder with contractor support today — the full advertiser and operator product, payments pipeline, and mobile app already shipped. This round funds the first full-time hires.

Founding engineer

Owns the 90-day roadmap: measurement, payouts, security hardening.

Operator success / GTM

Runs the hardware kit rollout and the first 100 operator signups by hand.

Founder (existing)

Product, fundraising, and the first advertiser relationships.

Hiring for the founding engineer and operator success roles begins within 30 days of close.

WHAT THIS ROUND BUYS

18 months to a proven, self-serve, two-sided marketplace.

0–3 MO

Close the loop

Measurement, payouts, and tenant security live in production. Public self-serve signup opens.

3–9 MO

Prove the wedge

Hardware kit ships to first 100 operators across 3 GTM verticals. First recurring advertiser cohort.

9–18 MO

Scale the network

Revenue run-rate and screen density sufficient to raise a Series A on real usage, not pilot data.

Each stage is gated on the one before it — the roadmap only advances once measurement, payouts, and security are provably live, not just built.

The DOOH giants just consolidated toward each other.

We're building for everyone they left out.
